molecules. Based on the chemical nature, lipids are classified as simple lipids, compound lipids and derived lipids. Simple lipids are esters of fatty acids with glycerol or long chain alcohols. Compound lipidsare esters of fatty acids with alcohol and they contain extra group. Derived lipids are formed by the hydrolysis of simple and compound lipids.

Nucleic Acids

Nucleic acids are made of polymer of nucleotides. Nucleotides consists of nitrogenous base, a pentose sugar and a phosphate group. Polymerized nucleotides form DNA and RNA which are genetic material.

DNA: DNA is a polymer of nucleotides containing 2-deoxyribose sugar and nitrogen bases like Adenine (A), Guanine (G), Thymine (T) and Cytosine(C).

RNA: RNA is a polymer of nucleotides containing ribose sugar and nitrogen bases like Adenine (A), Guanine (G), Uracil (U), and Cytosine(C).
