17.	Glutamic Acid	GLU	E	 Glutamic acid (Glu)	Polar, Acidic
18.	Arginine	ARG	R	 Arginine (Arg)	Polar, Basic
19.	Lysine	LYS	K	 Lysine (Lys)	Polar, Basic
20.	Histidine	HIS	H	 Histidine (His)	Polar, Basic

3.2.4 Stereo isomerism in aminoacids

All amino acids except glycine have at least one asymmetric carbon atom and hence they exist as stereo isomers and are normally represented as D and L isomers. Proteins are always made up of L amino acids. However D amino acids can be found in antibiotics, bacterial cell walls etc.
