- There are two types of respiration depending upon the availability of oxygen. They are aerobic respiration and anaerobic respiration.
- Selective permeability of plasma membrane enables the cell to maintain homeostasis.
- Diffusion involves movement of molecules from the region of their higher concentration to the region of their lower concentration which can occur without a semi permeable membrane.
- Osmosis involves movement of solvent molecules from the region of their higher concentration to the region of their lower concentration which can take place through a semi permeable membrane.
- Homeostasis is the maintenance of a constant internal environment of the body.
- Metabolism involves release and utilisation of energy or energy exchange within the organisms. It can be divided into two categories namely anabolism and catabolism.
- The repeated anabolic and catabolic reactions in the metabolic process maintain the homeostatic condition of the body.

GLOSSARY

Alveoli	Tiny air sacs of the lungs which allow for rapid gaseous exchange.
Eukaryotic	An organism having cells each with a distinct nucleus within which the genetic material is contained.
Organelles	Specialized structures within a cell that perform a specific function.
Micron	Small unit of measurement that measures length which is one thousand of a millimetre.
Haemoglobin	Iron containing red pigment of red blood cells of vertebrates, which gives red colour to blood.
Prokaryotic	Typically unicellular microorganism that lack a distinct nucleus and membrane bound organelles.
Diaphragm	The muscle that separates the chest (muscle) cavity from the abdomen.
Pleura	Protective covering of the lungs.
Metabolism	The sum of all chemical reactions by which living organisms sustain their life.

TEXTBOOK EXERCISES

32E4C7

I. Choose the best answer.

1. _____ is tough and thick white sheath that protects the inner parts of the eye.
   a) Sclera b) Conjunctiva
   c) Cornea d) Iris
2. _____ cells are specialised cells that can be transformed into any kind of cells.
   a) Nerve b) Stem c) Heart d) Bone
3. Maintenance of constant internal environment of the body is known as _____.
   a) homeostasis b) homeophytes
   c) homeokinesis d) homeophilics
4. In the absence of oxygen, glucose is broken down in to _____.
   a) lactic acid b) citric acid
   c) acetic acid d) nitric acid
