5. The process of air passing in and out the lungs is called _____.

   a) inhalation b) exhalation

   c) breathing d) None of these

6. Osmosis is the movement of water molecules from _____.

   a) higher concentration to a region of lower concentration.

   b) lower concentration to a region of higher concentration.

   c) Both of these d) None of these

7. The erythrocyte is placed in _____ solution which has lesser concentration of solutes and greater concentration of water than in the cytoplasm.

   a) hypotonic b) hypertonic

   c) neutral d) acidic

II. Fill in the blanks.

1. _____ is the structural and functional unit of living organisms.
2. The largest cell is egg of an _____.
3. _____ is a good example for anaerobic respiration.
4. _____ nerve is located at the end of the eyes behind the retina.
5. The size of the cells are measured in units of _____

III. Match the following.

Carbohydrates	CO_2, Water and Heat
Glucose	Amino acid
Protein	Glucose
Amino acids	Cholesterol and other steroid
Fatty acids	Enzymes, hormone, protein

IV. State true or false. If false, correct the statement.

1) In hypotonic condition, concentration of the external and the internal solution of the organism are same .
2) Diffusion is the movement of particles from an area of lower concentration to higher concentration .
3) Human beings are warm blooded in nature.
4) The larynx has fold of tissue which vibrate with the passage of air to produce sound.
5) Aqueous humour plays an important role in maintaining the shape of the eye.

V. Answer very briefly.

1. What is cell differentiation?
2. State different types of tissues.
3. Mention the function of 'Alveoli'.
4. Name the processes by which air enters and comes out of our lungs.
5. Differentiate osmoconformers and osmoregulators.
6. Define - Metabolism.

VI. Answer briefly.

1. Define - Prokaryotic cell.
2. Tabulate the differences between aerobic and anaerobic respiration.
3. Why the human eye is compared with camera?
4. Which organ and organ system help to maintain homeostasis?

VII. Answer in detail.

1. Draw the struture of human eye and label its parts.
2. Explain osmosis with an example.
3. Differentiate between inhalation and exhalation.
4. List out the different types of metabolism with an example.
5. Explain the mechanism of breathing.

VIII. Higher Order Thinking Questions.

1. Why do we need instant energy? Does glucose give that energy? Explain.
2. How are we preparing pickles? What are the steps involved in that?
