23.2 Worksheet and Workbook

A worksheet is the area where you perform all the tasks. You can enter and edit data in a work sheet. Combination of one or more worksheet forms a workbook. Every workbook contains three worksheets by default. Sheet-1 is the active worksheet when you open the Libre Office Calc window for the first time.

Column

A column is a vertical line of boxes. The columns are labeled from A to Z and thereafter as AA, AB…….up to AMJ.

Row

A row is a horizontal line of boxes. These are labeled with numbers like 1,2,3….and so on. There are 1,048,575 rows in a worksheet.

Cell

The intersection of a row and a column is known as cell. Each cell is identified by its address. The cell address is a combination of column letter and row number. The first active cell's address will be A1. The name box displays the address of the active cell.

Active Cell

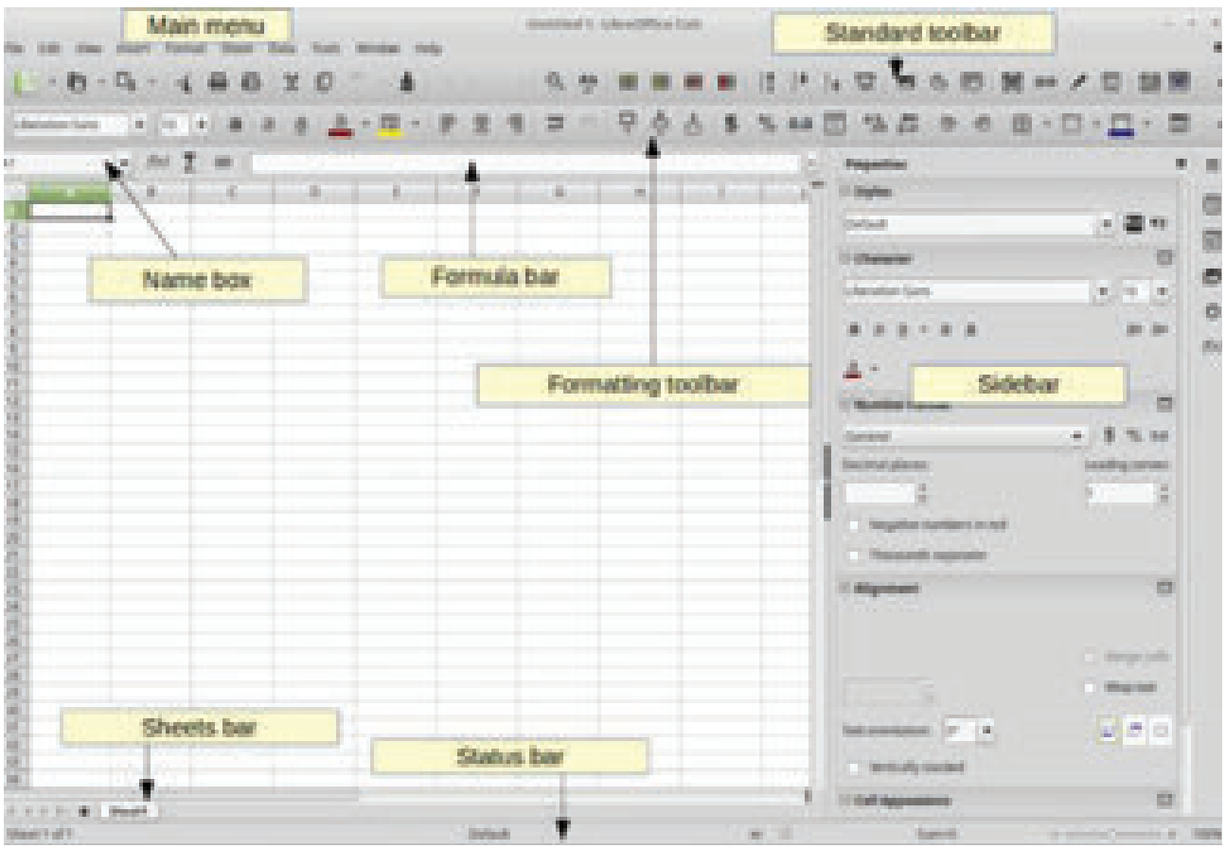

The highlighted cell on the worksheet is the active cell. You can enter your data only in an active cell.

You can easily make any cell active by using a mouse or a keyboard. If you want to make the cell C2 active, just click on the cell C2. You can also use arrow keys to select a cell.

Range of Cells

A group of cells is known as range of cells. It forms a rectangle or a square. For selecting a range of cells, press and hold the shift key and use the arrow key.

In the image given below the range of cells is starting from C6 and ending at C9.
