IV. Answer briefly.

1. Define focal length.
2. Give any two applications of a concave and convex mirror.
3. State the laws of reflection.
4. Define the refractive index of a medium.
5. State Snell's law of refraction

V. Answer in detail.

1. Explain the images formed by a concave mirror.
2. What is reflection? Write a short note on regular and irregular reflection.
3. Explain the working of a periscope.
4. What is dispersion? Explain in detail.

VI. Numerical problems.

1. The radius of curvature of a spherical mirror is 25 cm. Find its focal length.
2. If two plane mirrors are inclined to each other at an angle of 45°, find the number of images formed.
3. Speed of light in air is 3×10^8 m s^{-1} and the refractive index of a medium is 1.5. Find the speed of light in the medium.
