Waste is a giant that is becoming bigger by the day. It is going to harm the future generations even more than the current ones. The problems may be varied but there is a common approach to solve all of them.

Now it is your turn to work towards making your school sustainable and environmental friendly. Keep your project simple. The above are a few ideas; you are free to add your own ideas.

Guidelines

- Start an eco-club.
- Brainstorm and arrive at viable proposals for the project with the help of your teacher (such as one focussing on composting, energy-awareness, kitchen garden or recycling of water).
- Form appropriate groups and a students' council to head the same according to the proposal taken.
- You need the right team to build confidence in an idea and ultimately execute it.
- Design a project manual which explains the requirements.
- Present your project manual and a letter of request to your Head Master to institute a green revolving fund.
- Help your campus conduct an assessment on a periodic basis. (Develop an eco-contest in your campus and groups can compete against each other.)
- Develop a campaign. Write slogans and prepare placards. Organize monthly rallies to create community awareness.
- Explore every avenue for availability of resources. (eg. (a) for a compost pit, students can be asked to collect their kitchen waste and drop it in the compost pit in the campus. (b) for segregations of waste in two bins – red and green (non-biodegradable and biodegradable) – can be placed on each floor.)
- Execute your project and conduct appraisals on a regular basis by your teacher.

I can help the Earth

I will

I will

I will not

I promise
