

audience and listened to Hans give his lecture perfectly, and joined in the applause at the end.

However, before Hans could get off the platform, a professor shouted from the audience, "I'd like to ask you a question. Its very difficult but please answer it." He then asked the question so difficult that Hans had no idea what he was talking about.

Einstein thought, "Oh Dear, now we're in trouble." But Hans just laughed and said, "That's not a difficult question, sir. In fact, it's so easy even my driver knows how to answer it. Hans, stand up and……."

Einstein stood up and answered the question perfectly.

They left the university, with Einstein driving. A little later, Hans offered to take over from him. "No, my friend," laughed Einstein, "it's a pleasure to drive a genius like you."

THE COMET

F. Listen to the Passage Comets

Comets, meteors and asteroids have several things in common. First, they are believed to be remnants of the materials that created the Sun and the planets. Basically, they're leftovers. Comets, meteors and asteroids are too small to be planets. Some are only a few feet in size, while others are a mile or more long.

F2WD89

Comets are mostly made of ice. They are very old. As comets travel close to the Sun, some of the ice melts off and becomes a gas. This melting process causes bits of dust and debris to trail behind the comet. This tail can be seen in the night sky as a bright, quickly-moving light.

Comets orbit at the very edge of the galaxy, past Pluto.
